## Biological Microscope, Binocular & Trinocular

### A12.0921 Biological Microscope

With infinity color correction optical system and excellent compound eye illumination system, A12.0921 can get uniform illumination, clear and bright images at any magnification. User-friendly design, simple and convenient operation

## Compound Eye Illumination System

A12.0921 adopts the compound eye illumination system to improve the contrast rate and effectively improve the illumination uniformity of the specimen surface. Even at the edge of the field of view, uniform and bright background brightness can be achieved under any magnification.

Endometrial Carcinoma 40X Bright Field

### Bright Field Observation

The compound eye illumination system is equipped with professional plan achromatic objectives and has bright imaging. It can be used to observe cell structures and analyze plant slices.

### Phase Contrast Observation

It is applicable to observe the specimens with high transparency, such as cells, bacteria and other small, transparent objects in biological specimens.

Adherent Cells 10X Phase Contrast

Pine Needles 10X Polarization

### Simple Polarization Observation

It can judge substances with birefringence characteristic such as animals, plant cells and humoral crystals.

### Dark Field Observation

There is no need to replace the special dark field condenser, as long as the dark field accessories are inserted into the condenser and the diaphragm is switched, the dark field lighting can be realized.
