Product Description

1000X High precision Digital Optical Microscope Video Zoom A32.0601-200

Description:

The digital video zoom microscope combines the traditional optical technology and digital imaging technology and offers high quality video images. It can solve the problems generated by using a traditional microscope that requires a strict environment. Equipped with high performance Nickel hydrogen rechargeable battery, it can be used for longer inspection time in fieldwork. With powerful functions of real-time micro-photography, video recording and measurement, on-site high-speed image acquisition, digital image input to PC for inspection, image storage, video recording, measurement at micron-level and image output can be realized. It is a good substitute for a traditional optical magnifier, stereo microscope, comparing microscope, video measurement system and micro-photographing instrument. When used in long-distance scene evidence identification, the images of on-site evidence samples can be captured, inspected, compared and measured, and the on-site scene can enter the micro-world instantly.
